

Quality Assurance

These pages contain information on testing protocols, scripts, test results, etc.

Content	Description
QA Testing	Test protocols (not automated) for the current version of the system.
Features	Descriptions of features included in the QA tests

Reporting a bug on Testing or Beta Releases.

To report a bug encountered on one of these instances, use the 'Report A Problem' button that is visible in the lower right corner of most pages in the web application. Clicking on this button should create a pop-up window (assuming that such a browser action is not disabled or otherwise suppressed). Fill in the form in the pop-up window and submit it. This will generate a JIRA bug report in the correct JIRA project for releases of 1.2.5 (Alpha, Beta, or Final). This button and its reporting functionality will also be part of the release.
